## HOW TO MEASURE A PERSON FOR A FLIGHT SUIT

The measurements sequence and descriptive is as follows:

Chest	: Measure the circumference of the chest at armpit level, arms down, chest relaxed.
Waist	: Measure the circumference around waist at belly button level, or at the widest part for overweight people.
Hips	: Measure the circumference around widest part, at bum cheek level.
Inseam	: Measuring tape between the legs in the crotch, up against the body and then to about 4cm off the floor.
Outseam	: From hip bone to 4cm off the floor.
Shoulders	: From halfway in the shoulder curve, up to the nape bone (base of neck) down to the other shoulder curve halfway.
Sleeves	: From the same half round on the shoulder, arm bent 45° against the body, to length determining point on wrist.
Neck to waist	: From nape bone to cross in the back.
Neck to crotch	: From nape bone to in-between legs at the same point as the inseam. (Be careful as to not tighten the tape into the bum cheeks). Get the person to bend slightly forward, then take the measurement

The mannequin drawing helps to understand the measuring process to ensure a correct fit.

For ladies flight suits, we require the bra size.

If you have any uncertainties, do not hesitate to contact us for help.

To obtain a confirmed price including transport please print out this measurement sheet, complete and email back to [kerry@airwear.co.za](mailto:kerry@airwear.co.za)

**IMPORTANT:** The mannequin on this page explains how and where to measure a person in order for the flight suit to fit you. Measure the body carefully and complete ALL the requested details below. DO NOT make space allowances as these are taken care of during manufacture.
